Q/SP Chromstar® XL	
Q/SP Chromstar® BB XL	
DEAE Puredex® A50	
CM Puredex® C25	
Affinity Chromatography	21
Antibody purification	
Histidine-tagged proteins purification	
Immobilized metal ion affinity chromatography	
GST-tagged proteins purification	
Other types	
Hydrophobic Interaction Chromatography	33
MaXtar® Phenyl (HS)/(LS)	
MaXtar® Butyl/Octyl	
MaXtar® Phenyl/Octyl/Butyl HR	
Phenyl Chromstar® 6FF (HS)/(LS)	
Octyl/Butyl Chromstar® 4FF	
Butyl-S Chromstar® 6FF	
Phenyl/Butyl Chromstar® HP	

Multimodal Chromatography**39**

- MaXtar® MMC
- MaXtar® MMC HR
- MaXtar® COLL 700
- MaXtar® COLL 400
- MaXtar® MMA
- MaXtar® MMA HR
- BaronCHT® type I
- BaronCHT® type II

Chromatography Application**45**

- Antibodies
- Plasmids
- Viral vectors
- Polysaccharide (-Protein Conjugate) Vaccines

Common names and abbreviations in this Selection Guide:**Names:**

MaXtar®: High-rigidity chromatography resin based on an improved agarose-based matrix, with high flow velocity, high binding capacity, and low back pressure

Chromstar®: Chromatography resin based on an improved agarose-based matrix, with organic solvent resistance and good chemical stability

Puredex®: Chromatography resin based on a dextran-based matrix, with good chemical stability

Geldex®: High-resolution chromatography resin based on an improved agarose-based matrix, with weak non-specific adsorption and good chemical stability

Abbreviations:

PG: Prep grade

HR: High resolution

XL: Dextran surface extender on the matrix with high binding capacity

BB: Big Beads chromatography resin, with a mean particle size of 200 µm

FF: Fast flow, with a mean particle size of 90 µm

HP: High performance, with a mean particle size of 34 µm

HS: High sub, high degree of ligand substitution

LS: Low sub, low degree of ligand substitution

Puredex® G-25 (C, M, F, SF):

C: Coarse, with a range of particle sizes of 100-300 µm

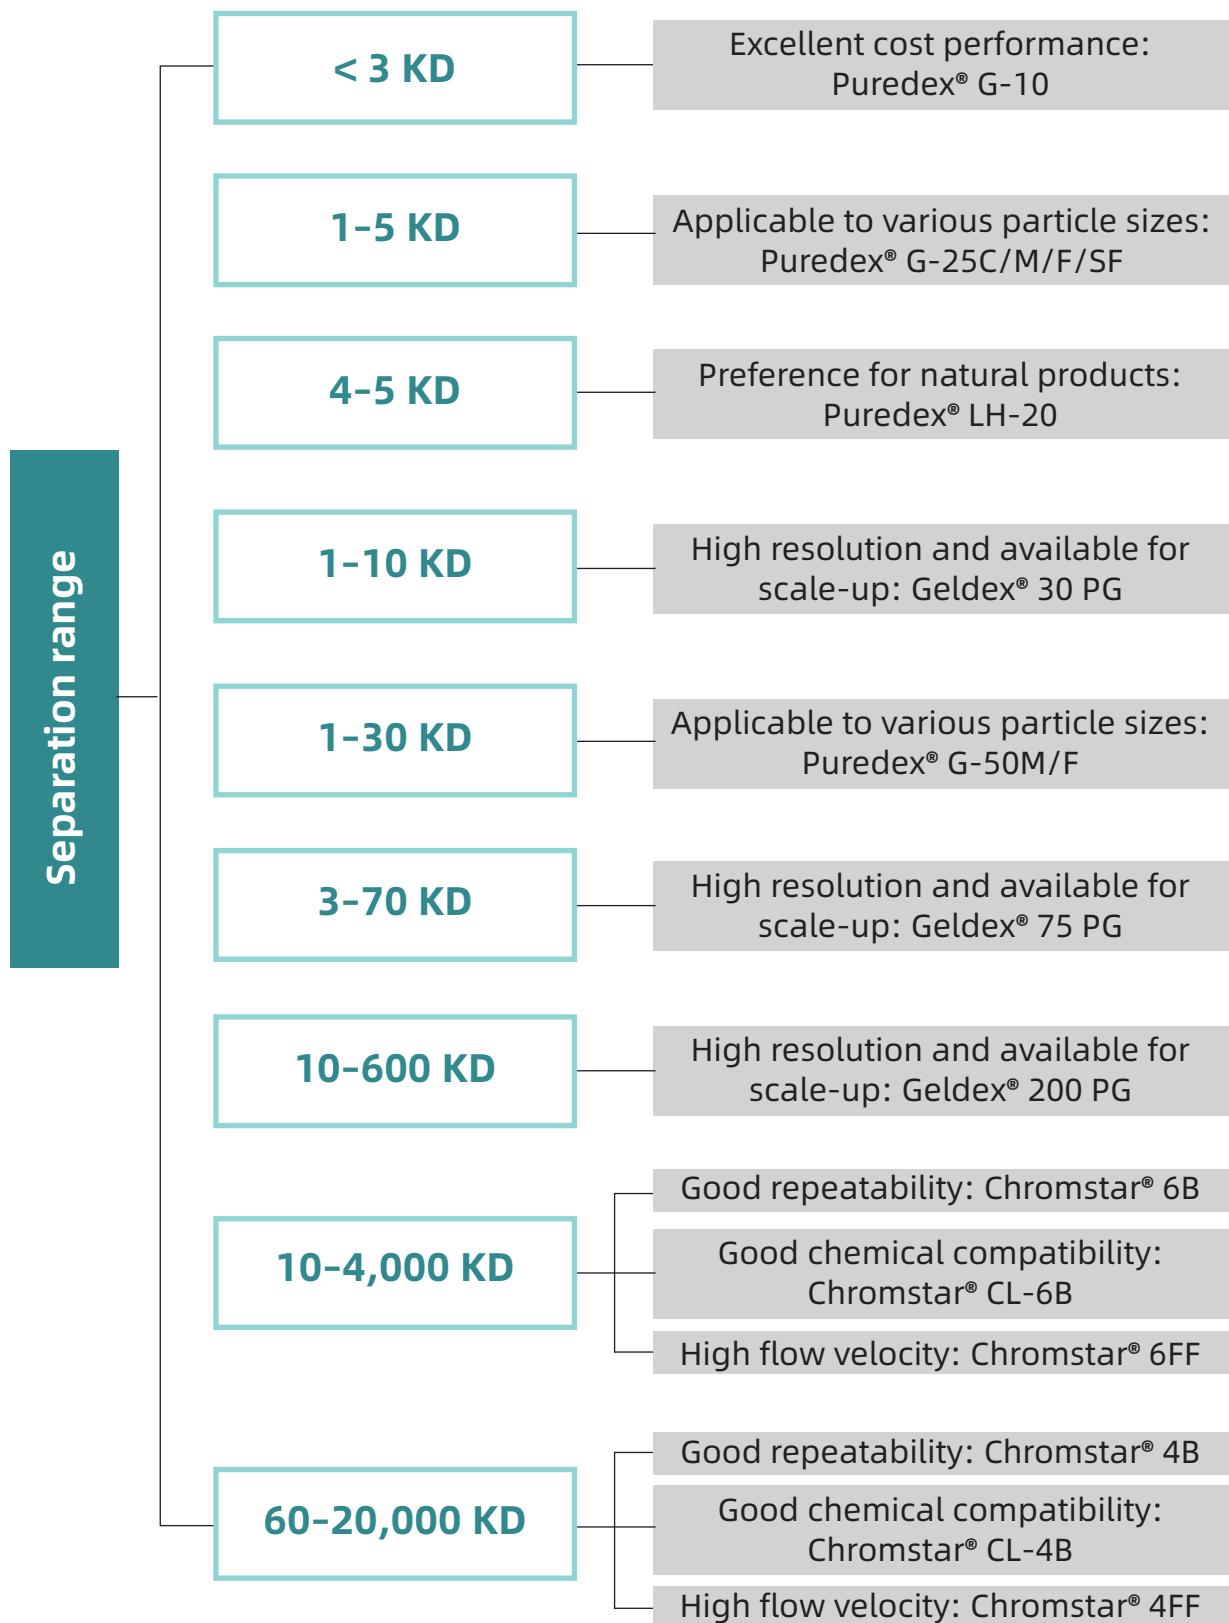

M: Medium, with a range of particle sizes of 50-150 µm

F: Fine, with a range of particle sizes of 20-80 µm

SF: Superfine, with a range of particle sizes of 20-50 µm

Note: The "maximum back pressure" in this Selection Guide refers to the back pressure of the chromatography resin, i.e., the test data obtained from the chromatographic column (inner diameter: 300 mm). The column hardware pressure limit of Chrom-Trap® and Chrom-Screen™ are both 0.5 MPa.

Size Exclusion Chromatography

Best Tool for Macromolecule Separation — Chromstar® 6FF

Chromstar® 6FF size exclusion chromatography resin is based on a highly cross-linked agarose-based matrix (6% cross-linking ratio), which can separate different molecules by the difference in molecular weight and molecular conformation. It is suitable for the separation and purification of various biomolecules, such as recombinant proteins, antibodies, nucleic acids, viruses, virus-like particles, and polysaccharides.

Chromstar® 6FF has excellent scale-up performance:

- The highly cross-linked agarose-based matrix has excellent rigidity. This helps not only to reduce the requirements on bed height but also to achieve high process flow velocity under low back pressure, improving process efficiency.
- The improved spherification process contributes to a smaller diffusion effect for better resolution.

Chromstar® FF

- High-flow velocity chromatography resin based on an agarose-based matrix
- With weak non-specific adsorption and good chemical stability
- Suitable for the separation of polysaccharides, recombinant proteins, viruses, and other large molecules

Product	Separation range of globulin (kD)	Range of particle sizes (μm)	Max. back pressure (MPa)	Max. flow velocity (cm/h)	Quantity	Product code
Chromstar® 4FF	60-20,000	45-165	0.3	250	25 mL	1010-1121
					100 mL	1010-1122
					500 mL	1010-1123
					1 L	1010-1124
					5 L	1010-1125
					10 L	1010-1126
					20 L	1010-1127
					25 mL	1010-1131
					100 mL	1010-1132
					500 mL	1010-1133
Chromstar® 6FF	10-4,000	45-165	0.3	300	1 L	1010-1134
					5 L	1010-1135
					10 L	1010-1136
					20 L	1010-1137

Chromstar® CL

- Chromatography resin based on an improved agarose-based matrix
- With organic solvent resistance and good chemical stability
- Suitable for the separation of polysaccharides, recombinant proteins, nucleic acids, and other biomolecules, or determination of QC molecular weight

Product	Separation range of globulin (kD)	Range of particle sizes (μm)	Max.back pressure (MPa)	Max. flow velocity (cm/h)	Quantity	Product code
Chromstar® CL-4B	60-20,000	45-165	0.025	30	25 mL	1010-1151

					10 L	1010-1186
					20 L	1010-1187

Geldex® PG

- High-resolution chromatography resin based on an improved agarose-based matrix
- With weak non-specific adsorption and good chemical stability
- Suitable for the separation of various biomolecules, including polypeptides, polysaccharides, recombinant proteins, nucleic acids, viruses, etc.

Product	Separation range of globulin (kD)	Range of particle sizes (µm)	Max.back pressure (MPa)	Max. flow velocity (cm/h)	Quantity	Product code

					5 kg	1050-2164

Puredex® LH-20

- Chromatography resin based on a dextran-based matrix
- Substituted by hydroxypropyl, suitable for aqueous or organic phase, with good chemical stability
- Suitable for the separation of natural products and other substances with small differences

Product	Exclusion limit (KD)	Range of particle sizes (µm)	Max.back pressure (MPa)	Max. flow velocity (cm/h)	Quantity	Product code
Puredex® LH-20	4-5	20-120	0.3	700	100 g	1050-2101
					500 g	1050-2102
					1 kg	1050-2103
					5 kg	1050-2104

Ion Exchange Chromatography

Anion exchange chromatography resin

High flow velocity, low back pressure, and high binding capacity:

- MaXtar® Q
- MaXtar® DEAE

High flow velocity and high resolution:

- MaXtar® Q HR

High binding capacity and high resolution:

- MaXtar® Q HR XL

High flow velocity:

- Q Chromstar® FF
- DEAE Chromstar® FF

High resolution:

- Q Chromstar® HP
- DEAE Chromstar® HP

Ultra-high binding capacity:

- Q Chromstar® XL
- Q Chromstar® BB XL

Special for ultra-high flow velocity:

- Q Chromstar® BB

Classic dextran-based matrix:

- DEAE Puredex® A50

Cation exchange chromatography resin

High flow velocity, low back pressure, and high binding capacity:

- MaXtar® S

High flow velocity and high resolution:

- MaXtar® SP HR

High binding capacity and high resolution:

- MaXtar® SP HR XL

High flow velocity:

- SP Chromstar® FF
- S Chromstar® FF
- CM Chromstar® FF

High resolution:

- SP Chromstar® HP
- CM Chromstar® HP

Ultra-high binding capacity:

- SP Chromstar® XL
- SP Chromstar® BB XL

Special for ultra-high flow velocity:

- SP Chromstar® BB

Classic dextran-based matrix:

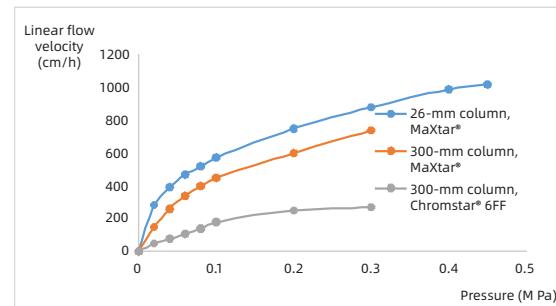

- CM Puredex® C25

High-Flow Velocity Anion Exchange — MaXtar® Q

MaXtar® Q is a strong anion exchange chromatography resin that can separate different molecules by leveraging their differences in the nature and magnitude of charge under specific conditions. It is suitable for the separation and purification of various biomolecules, such as recombinant proteins, antibodies, nucleic acids, viruses, virus-like particles, and polysaccharides.

MaXtar® Q provides superior performance over traditional strong anion exchange chromatography resins:

- The improved MaXtar® matrix has excellent rigidity. This helps to achieve higher process flow velocity under low back pressure, improving process efficiency.
- The dynamic binding capacity of the chromatography resin is increased with an improved ligand conjugating method.

MaXtar®

- Chromatography resin based on an improved agarose-based matrix
- With high flow velocity, low back pressure, and high binding capacity, easy to scale up linearly
- With organic solvent resistance and good chemical stability

MaXtar® prepacked column

Product	Inner diameter x Column bed (mm)	Dynamic binding capacity	Mean particle size (µm)	Max.back pressure (MPa)	Recommended flow velocity (mL/min)	Quantity	Product code
Chrom-Trap® MaXtar® Q 1 mL	7.7/25	> 100 mg BSA/mL	90	0.5	1	1 x 1 mL	2014-1821
Chrom-Screen™ MaXtar® Q 4.7 mL	7.7/100	> 100 mg BSA/mL	90	0.5	1-4.7	1 x 4.7 mL	2014-1822

					10 L	1028-1116
					20 L	1028-1117

Other types

- Chromatography resin based on an improved agarose-based matrix
- With wide range resistance and good chemical stability
- With multiple particle sizes for the separation of multiple samples

Prepacked column for other types of affinity

Product	Inner diameter x Column bed (mm)	Feature	Mean particle size (µm)	Max.back pressure (MPa)	Recommended flow velocity (mL/min)	Quantity	Product code
Chrom-Trap® MaXtar® PlasmidCap HR 1 mL	7.7/25	High binding capacity High flow velocity High resolution For separation of supercoiled plasmid DNA	40	0.5	1	1 x 1 mL	2031-1821
Chrom-Screen™ MaXtar® PlasmidCap HR 4.7 mL	7.7/100	High binding capacity High flow velocity High resolution For separation of supercoiled plasmid DNA	40	0.5	1-4.7	1 x 4.7 mL	2031-1822
Chrom-Trap® MaXtar® PlasmidCap HR 5 mL	16/25	High binding capacity High flow velocity High resolution For separation of supercoiled plasmid DNA	40	0.5	1-5	1 x 5 mL	2031-1823
Chrom-Trap® Heparin Chromstar® FF 1 mL	7.7/25	High flow velocity For separation of anticoagulant factors, interferon, and DNA-binding proteins	90	0.3	1	1 x 1 mL	2023-1131
Chrom-Screen™ Heparin Chromstar® FF 4.7 mL	7.7/100	High flow velocity For separation of anticoagulant factors, interferon, and DNA-binding proteins	90	0.3	1-4.7	1 x 4.7 mL	2023-1132
Chrom-Trap® Heparin Chromstar® FF 5 mL	16/25	High flow velocity For separation of anticoagulant factors, interferon, and DNA-binding proteins	90	0.3	1-5	1 x 5 mL	2023-1133
Chrom-Trap® Heparin Chromstar® HP 1 mL	7.7/25	High resolution For separation of anticoagulant factors, interferon, and DNA-binding proteins	34	0.3	1	1 x 1 mL	2023-1111
Chrom-Screen™ Heparin Chromstar® HP 4.7 mL	7.7/100	High resolution For separation of anticoagulant factors, interferon, and DNA-binding proteins	34	0.3	1-4.7	1 x 4.7 mL	2023-1112
Chrom-Trap® Heparin Chromstar® HP 5 mL	16/25	High resolution For separation of anticoagulant factors, interferon, and DNA-binding proteins	34	0.3	1-5	1 x 5 mL	2023-1113

Chrom-Trap® Benzamidine Chromstar® 4FF (HS) 1 mL	7.7/25	High flow velocity High degree of ligand substitution For separation of serine protease and trypsin	90	0.3	1	1 × 1 mL	2025-1121
Chrom-Screen™ Benzamidine Chromstar® 4FF (HS) 4.7 mL	7.7/100	High flow velocity High degree of ligand substitution For separation of serine protease and trypsin	90	0.3	1-4.7	1 × 4.7 mL	2025-1122
Chrom-Trap® Benzamidine Chromstar® 4FF (HS) 5 mL	16/25	High flow velocity High degree of ligand substitution For separation of serine protease and trypsin	90	0.3	1-5	1 × 5 mL	2025-1123
Chrom-Trap® MaXtar® Blue 1 mL	7.7/25	High binding capacity High flow velocity For separation of antithrombin, lipoprotein, interferon, and albumin	75	0.5	1	1 × 1 mL	2030-1821
Chrom-Screen™ MaXtar® Blue 4.7 mL	7.7/100	High binding capacity High flow velocity For separation of antithrombin, lipoprotein, interferon, and albumin	75	0.5	1-4.7	1 × 4.7 mL	2030-1822
Chrom-Trap® MaXtar® Blue 5 mL	16/25	High binding capacity High flow velocity For separation of antithrombin, lipoprotein, interferon, and albumin	75	0.5	1-5	1 × 5 mL	2030-1823
Chrom-Trap® MaXtar® Blue (HS) 1 mL	7.7/25	High degree of ligand substitution Ultra-high binding capacity High flow velocity For separation of antithrombin, lipoprotein, interferon, and albumin	75	0.5	1	1 × 1 mL	2032-1821
Chrom-Screen™ MaXtar® Blue (HS) 4.7 mL	7.7/100	High degree of ligand substitution Ultra-high binding capacity High flow velocity For separation of antithrombin, lipoprotein, interferon, and albumin	75	0.5	1-4.7	1 × 4.7 mL	2032-1822
Chrom-Trap® MaXtar® Blue (HS) 5 mL	16/25	High degree of ligand substitution Ultra-high binding capacity High flow velocity For separation of antithrombin, lipoprotein, interferon, and albumin	75	0.5	1-5	1 × 5 mL	2032-1823

Chrom-Screen™ Blue Chromstar® FF 4.7 mL	7.7/100	High flow velocity For separation of antithrombin, lipoprotein, interferon, and albumin	90	0.15	1-4.7	1 × 4.7 mL	2030-1132
Chrom-Trap® Blue Chromstar® HP 1 mL	7.7/25	High resolution For separation of antithrombin, lipoprotein, interferon, and albumin	34	0.3	1	1 × 1 mL	2030-1111
Chrom-Screen™ Blue Chromstar® HP 4.7 mL	7.7/100	High resolution For separation of antithrombin, lipoprotein, interferon, and albumin	34	0.3	1-4.7	1 × 4.7 mL	2030-1112
Chrom-Trap® Blue Chromstar® HP 5 mL	16/25	High resolution For separation of antithrombin, lipoprotein, interferon, and albumin	34	0.3	1-5	1 × 5 mL	2030-1113
Chrom-Trap® NHS activated Chromstar® 4FF 1 mL	7.7/25	Pre-activated chromatography resin Rapidly binding with free amino groups With spacer arm Strong chemical stability of covalent bonds With resistance to high pH	90	0.3	1	1 × 1 mL	2071-1121
Chrom-Screen™ NHS activated Chromstar® 4FF 4.7 mL	7.7/100	Pre-activated chromatography resin Rapidly binding with free amino groups With spacer arm Strong chemical stability of covalent bonds With resistance to high pH	90	0.3	1-4.7	1 × 4.7 mL	2071-1122
Chrom-Trap® NHS activated Chromstar® 4FF 5 mL	16/25	Pre-activated chromatography resin Rapidly binding with free amino groups With spacer arm Strong chemical stability of covalent bonds With resistance to high pH	90	0.3	1-5	1 × 5 mL	2071-1123

Chromatography resin for other types of affinity

Product	Feature	Mean particle size (µm)	Max. flow velocity (cm/h)	Quantity	Product code

Hydrophobic Interaction Chromatography

MaXtar®

- High-flow velocity chromatography resin based on an improved agarose-based matrix
- With excellent rigidity, high flow velocity, low back pressure, easy to scale up
- With resistance to high-concentration salt, wide pH range, and organic solvents, and with good chemical stability

MaXtar® prepacked column

Product	Inner diameter x Column bed (mm)	Feature	Mean particle size (µm)	Max.back pressure (MPa)	Recommended flow velocity (mL/min)	Quantity	Product code
Chrom-Trap® MaXtar® Phenyl (HS) 1 mL	7.7/25	High degree of ligand substitution Ultra-strong hydrophobicity	75	0.5	1	1 x 1 mL	2045-1821
Chrom-Screen™ MaXtar® Phenyl (HS) 4.7 mL	7.7/100	High degree of ligand substitution Ultra-strong hydrophobicity	75	0.5	1-4.7	1 x 4.7 mL	2045-1822
Chrom-Trap® MaXtar® Phenyl (HS) 5 mL	16/25	High degree of ligand substitution Ultra-strong hydrophobicity	75	0.5	1-5	1 x 5 mL	2045-1823
Chrom-Trap® MaXtar® Butyl 1 mL	7.7/25	Weak hydrophobicity	75	0.5	1	1 x 1 mL	2041-1821
Chrom-Screen™ MaXtar® Butyl 4.7 mL	7.7/100	Weak hydrophobicity	75	0.5	1-4.7	1 x 4.7 mL	2041-1822
Chrom-Trap® MaXtar® Butyl 5 mL	16/25	Weak hydrophobicity	75	0.5	1-5	1 x 5 mL	2041-1823
Chrom-Trap® MaXtar® Octyl 1 mL	7.7/25	Strong hydrophobicity	75	0.5	1	1 x 1 mL	2043-1821

Multimodal Chromatography

MaXtar® COLL 700 is a multimodal chromatography resin. Different from traditional chromatography resins, MaXtar® COLL 700 consists of two layers of different structures. Its outer shell is a porous passivation layer to ensure that macromolecules above 700 kD would not enter the pores but flow directly through the outer water instead. Its core is a spherical inner core coupled with a ligand of both hydrophobic and positive charge adsorption functions, which helps to maximize the binding of impurities such as host proteins and nucleic acids. It is suitable for the separation and purification of various macromolecular biological samples, such as viruses and virus-like particles.

MaXtar® COLL 700 provides superior performance over traditional single-modal chromatography resins:

- (1) The unique double-layer structure design helps to process macromolecules above 700 KD in flow-through mode, making process optimization easier and linear scale-up more convenient.
- (2) The improved MaXtar® matrix has excellent rigidity. This helps to achieve higher process flow velocity under low back pressure, improving process efficiency.
- (3) Compared with traditional size exclusion chromatography resins, MaXtar® COLL 700 has a larger loading amount, which helps to reduce costs.

MaXtar® MMC

- High-flow velocity chromatography resin based on an improved agarose-based matrix
- With wide range resistance and good chemical stability
- Various optional ligands available, presenting the combined separation effect of multiple chromatography principles

MaXtar® MMC prepacked column

Product	Inner diameter × Column bed (mm)	Feature	Mean particle size (µm)	Max.back pressure (MPa)	Recommended flow velocity (mL/min)	Quantity	Product code

Chromatography Application

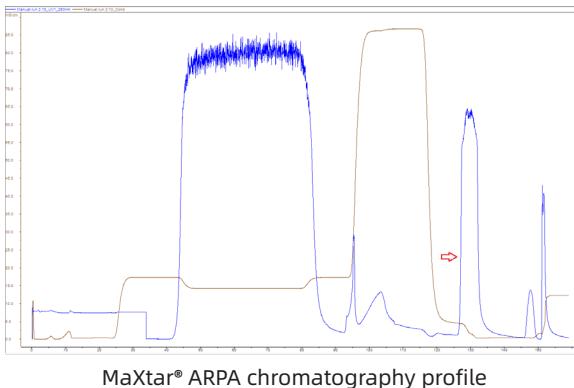

Antibodies

Antibodies, also called immunoglobulins, are a large group of proteins that specifically bind to antigens. Common therapeutic antibody drugs include monospecific antibodies, bispecific antibodies, and antibody-drug conjugates (ADCs). The flowchart of the antibody manufacturing process is as follows:

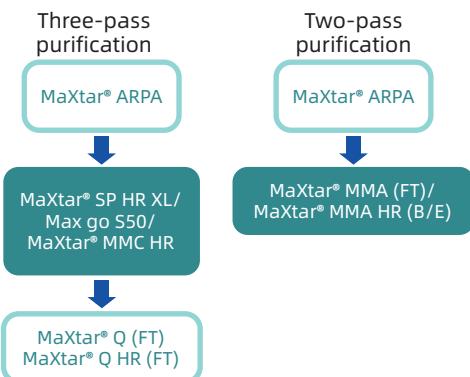

Application cases (monoclonal antibody):

Step 1 - Affinity chromatography: Use MaXtar® ARPA resin to capture monoclonal antibodies.

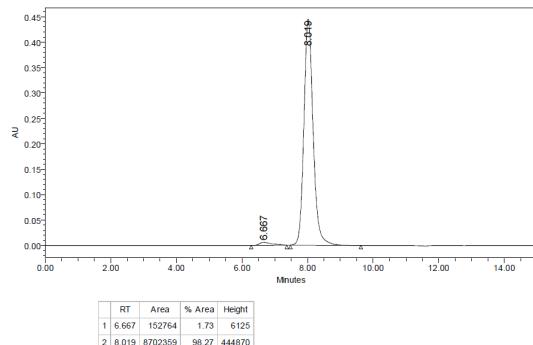

MaXtar® ARPA chromatography profile

Antibody purification can be achieved using the three-pass procedure or two-pass procedure, including the capture of Protein A and 1-2 fine purification steps. BioLink offers the following solutions correspondingly:

Step 2 - Multimodal chromatography: Use MaXtar® MMA resin to remove polymers via the flow-through mode.

SEC-HPLC results of MaXtar® MMA-collected samples

Data summary of two-pass chromatography:

Chromatography step	Rec (%)	Monomer purity (%)
MaXtar® ARPA	99	96.35
MaXtar® MMA	90	98.27

Ordering information:

Product	Product code	Quantity
Chrom-Screen™ MaXtar® ARPA 4.7 mL	2024-1822	1 x 4.7 mL
Chrom-Screen™ MaXtar® SP HR 4.7 mL	2011-1812	1 x 4.7 mL
Chrom-Screen™ MaXtar® MMA 4.7 mL	2062-1822	1 x 4.7 mL
Chrom-Screen™ MaXtar® MMA HR 4.7 mL	2062-1812	1 x 4.7 mL
Chrom-Screen™ MaXtar® MMC HR 4.7 mL	2061-1812	1 x 4.7 mL
Chrom-Screen™ MaXtar® Q HR 4.7 mL	2014-1812	1 x 4.7 mL

Note: The bed height of the 4.7 mL prepacked column is 10 cm, which is suitable for process optimization and scale-up

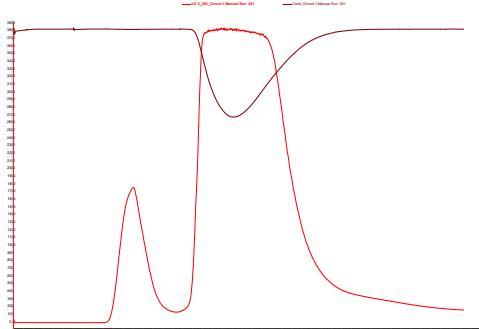

Plasmid

With the development of mRNA drugs, cell therapy, and gene therapy, plasmid DNA has been applied in a wide range of fields. It acts as the template for *in vitro* transcription in mRNA drug production. Also, it is a kind of nucleic acid drugs, or can be used as the raw material of virus packaging in the production of recombinant viral vectors.

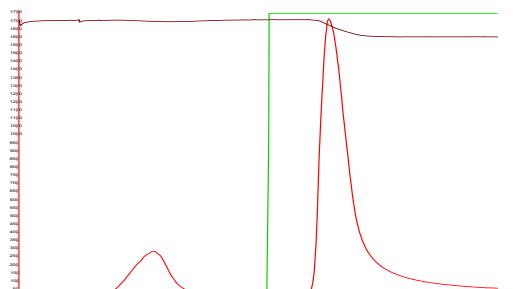

Application cases (plasmid):

Step 1 - Size exclusion chromatography: Use Chromstar® 6FF to remove RNA and exchange the buffer at the same time.

Chromstar® 6FF size exclusion chromatography profile

Step 2 - Affinity chromatography: Use MaXtar® PlasmidCap HR resin to specifically bind with supercoiled plasmids to allow the open circular plasmids to flow through, thus achieving the separation of supercoiled plasmids from open circular plasmids in a high-efficient manner.

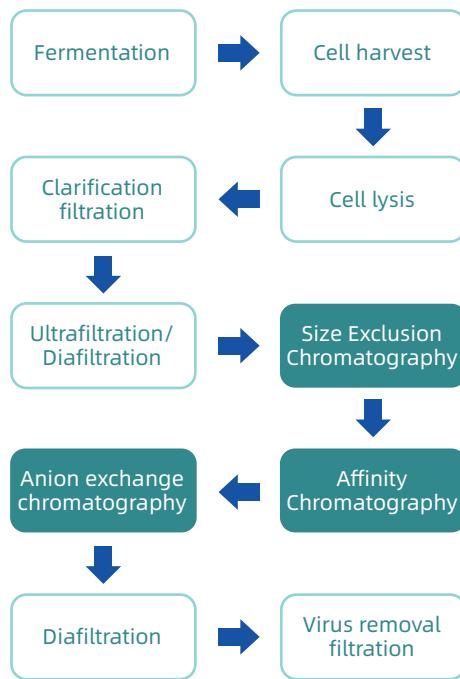

MaXtar® PlasmidCap HR affinity purification profile

Data summary of three-pass chromatography:

Chromatography step	Rec (%)*	Supercoiled plasmid purity (%)	HCD (%)	Endotoxin (EU/mg)
Chromstar® 6FF	95	88	NA	NA
MaXtar® PlasmidCap HR	92	96	0.20	NA
MaXtar® Q HR	85	98	0.10	< 5

* Calculated based on the supercoiled plasmid content

Flowchart of plasmid DNA manufacturing process

Step 3 - Anion exchange chromatography: Use MaXtar® Q HR for further purification to control the endotoxin level within the specified range for qualification.

MaXtar® Q HR anion purification profile

Ordering information:

Product	Product code	Quantity
Chromstar® 6FF	1010-1132	100 mL
Chrom-Screen™ MaXtar® PlasmidCap HR 4.7 mL	2031-1822	1 × 4.7 mL
Chrom-Screen™ MaXtar® Q HR 4.7 mL	2014-1812	1 × 4.7 mL

Note: The bed height of the 4.7 mL prepacked column is 10 cm, which is suitable for process optimization and scale-up

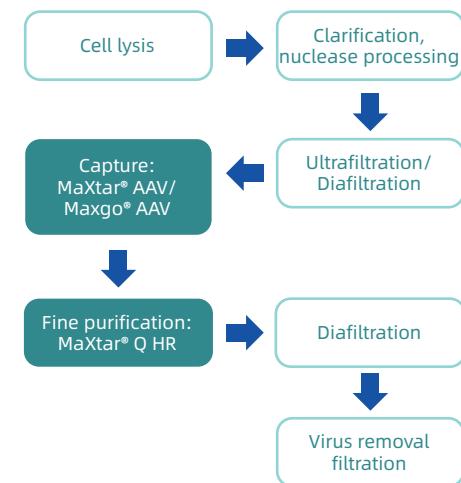

Viral vectors

Viral vectors are the delivery media commonly used in the field of cell therapy and gene therapy, and are getting more and more attention. Common viral vectors include adenovirus (AdV), adeno-associated virus (AAV), lentivirus (LV), and herpes simplex virus (HSV).

Taking AAV as an example, we recommend the purification strategy of the affinity resin MaXtar® AAV/Maxgo® AAV in combination with the ion exchange resin MaXtar® Q HR for the downstream purification. Where, MaXtar® AAV/Maxgo® AAV is a broad-spectrum affinity chromatography resin suitable for all AAV serum types.

Also, for most viral vectors, the two-pass purification is applicable with the ion exchange resin MaXtar® Q HR in combination with the multimodal resin MaXtar® COLL 700/400.

Flowchart of AAV manufacturing process

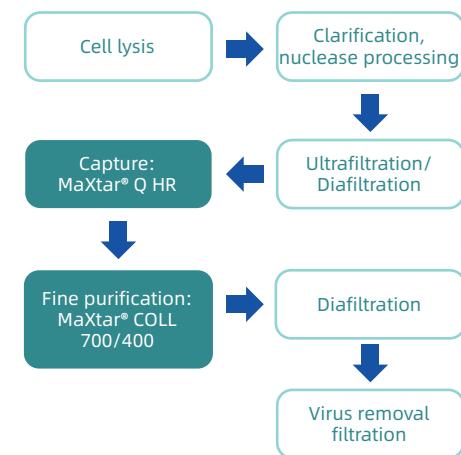

Ordering information:

Product	Product code	Quantity
Chrom-Screen™ MaXtar® AAV 4.7 mL	2036-1822	1 × 4.7 mL
Chrom-Screen™ Max go AAV 4.7 mL	3036-1112	1 × 4.7 mL
Chrom-Screen™ MaXtar® COLL 400 4.7 mL	2064-1822	1 × 4.7 mL
Chrom-Screen™ MaXtar® COLL 700 4.7 mL	2063-1822	1 × 4.7 mL
Chrom-Screen™ MaXtar® Q HR 4.7 mL	2014-1812	1 × 4.7 mL

Note: The bed height of the 4.7 mL prepacked column is 10 cm, which is suitable for process optimization and scale-up

Flowchart of the manufacturing process of other viral vectors

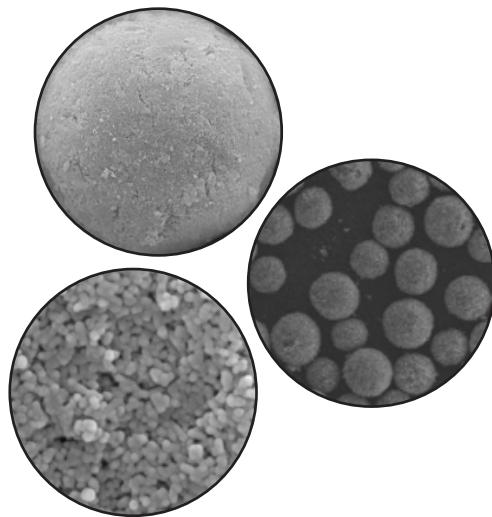

Polysaccharide (-Protein Conjugate) Vaccines

Polysaccharide-protein conjugate vaccine is prepared with the polysaccharides on the cell surface binding to the carrier proteins using chemical methods. Such vaccines include meningococcal polysaccharide-protein conjugate vaccines, pneumococcal polysaccharide-protein conjugate vaccines, and other vaccines.

For the purification of meningococcal polysaccharides, we recommend the serial connection of two chromatography resins, i.e., the multimodal resin MaXtar® MMA and the ion exchange resin MaXtar® DEAE, together with the desalting column Puredex® G-25 to exchange the buffer.

For the fine-purification of polysaccharides in the purification process of pneumococcal polysaccharides, we recommend the hydroxyapatite BaronCHT® in combination with the desalting column Puredex® G-25. Compared with the single-property resins, the multimodal hydroxyapatite BaronCHT® is an inorganic pure-phase chromatography resin with a stable spherical structure and uniformed particle sizes, applicable to multiple separation modes, including cation exchange, calcium affinity, and separation by hydroxyl groups. It is characterized by high flow velocity, high binding capacity, and good inter-batch repeatability, suitable for commercialized scale-up production.

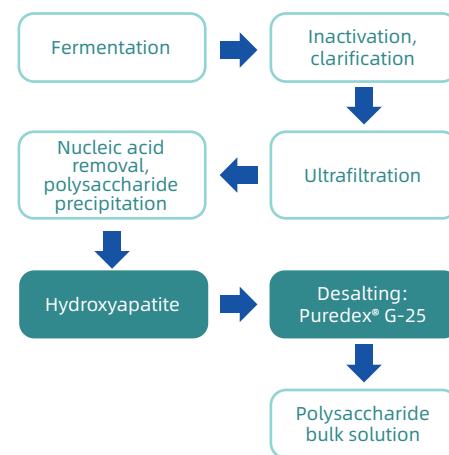

Spherical appearance and typical crystal structure of hydroxyapatite

About BioLink

BioLink is a group of technology-driven businesses that provide process solutions in the life sciences industry. The company focuses on the development and production of the key processing equipment and consumables used in the manufacturing process of recombinant protein drugs, vaccines, antibodies, cell therapies, gene therapies, and other biological products. BioLink's portfolio of offerings covers the entire upstream and downstream bioprocess such as cell culture, single-use mixing and storage, chromatography, filtration (ultrafiltration/diafiltration, clarification, and virus removal), and hydration products, as well as process development services. BioLink is committed to providing customers with high-quality, innovative products and solutions and strives to build an efficient, safe and competitive biopharmaceutical supply chain eco-system.
